

DishaSetu AI

AI-Powered Career Readiness & Employability Platform

"Bridging Campus to Corporate"

EXECUTIVE SUMMARY

DishaSetu AI is an integrated employability ecosystem that transitions career preparation from an isolated job search into a structured journey. We empower candidates to identify skill gaps, build readiness, and connect with opportunities, while enabling organizations to hire based on verified skills.

The Problem Statement

A massive gap exists between academic education and industry requirements, causing friction in the hiring ecosystem.

Candidate Challenges

- Possess degrees but lack clear industry readiness.
- Unable to identify precise missing skills for target roles.
- Struggle to understand why they are rejected.
- Lack structured, role-specific interview preparation.

Organization Challenges

- Overwhelmed by applications with varying skill levels.
- Difficulty matching candidates to exact skill needs.
- Lack AI-assisted, objective evaluation structures.

Proposed Solution & Value Proposition

DishaSetu AI solves this dual-sided problem by creating a connected ecosystem where **employability is built, verified, and dynamically matched**.

1

For Candidates

A clear pathway from skill discovery to job readiness, replacing guesswork with a deterministic roadmap and real-time AI guidance.

2

For Organizations

A transparent pipeline that transitions recruitment from generic resume-parsing to precise, skill-based candidate matching.

How the Platform Works

1. THE CANDIDATE FLOW

Focuses on building employability *before* applying. Candidates discover skill gaps, learn, verify, and prepare.

2. THE ORGANIZATION / RECRUITER FLOW

Organizations define required skills. Candidates see their exact match/gaps, ensuring highly relevant applications.

3. THE ADMIN ROLE

Platform governance layer managing users, organizations, opportunity oversight, and overarching ecosystem health.

Key AI Capabilities

AI is strategically combined with deterministic backend logic to improve consistency, validation, and reliability.

Resume Intelligence & ATS

Extracts meaningful career data, calculates ATS scores, finds missing keywords for target roles, and suggests bullet-point improvements.

Skill Gap Analysis

Contrasts a candidate's current capabilities against deterministic market requirements, highlighting exactly what skills need improvement.

AI Mock Interviews

Generates dynamic, role-relevant interactions to simulate technical and HR interviews, evaluating candidate responses in real-time.

Smart Opportunity Matching

Compares candidate skills with organization-defined requirements to generate a transparent match score prior to application.

Impact & Target Audience

CORE DIFFERENTIATION

TRADITIONAL APPROACH:

Student → Resume → Search Jobs → Apply

DISHASETU AI ECOSYSTEM:

Skill Discovery → Gap Analysis → Learning Roadmap → Interview Prep → Relevant Opportunities → Apply

Target Users

- Students & Job Seekers
- Organizations & Recruiters
- Educational Institutions

Expected Impact

- Better candidate understanding of skill gaps
- Skill-based organizational candidate discovery
- Personalized career direction & prep
- Structured, AI-assisted recruitment

Technology & Architecture

Tech Stack

Frontend: React 18, Vite, Tailwind CSS

Backend: Node.js, Express.js (REST APIs)

Database: MongoDB, Mongoose ORM

AI Layer: Gemini API + Deterministic Logic

One-Line Solution

"DishaSetu AI is an AI-powered employability platform that helps candidates identify skill gaps, build job-ready capabilities, prepare for interviews, and connect with relevant opportunities while enabling organizations to discover and evaluate candidates based on their skills."
